NCCRT Primary Care Strategy Meeting
Catalyzing Primary Care to Increase Colorectal Cancer Screening
August 12, 2022
8:30am-3:45pm ET
Today’s Meeting Objectives

1. Better understand the barriers, needs, and priorities of primary care providers and those working in primary care settings related to colorectal cancer (CRC) screening.

2. Pinpoint collaborative opportunities among NCCRT members and primary care-focused organizations and societies.

3. Capitalize on momentum and develop strategies to better support those in primary care through dissemination of resources, information sharing, and promote collaboration.

4. Leave with an understanding of what we can and will commit to.
The State of Primary Care
Richard C. Wender MD
Professor and Chair
Family Medicine and Community Health
University of Pennsylvania
The State of Primary Care: The Bottom Line

• Having a primary care clinician is associated with substantial improvements in health and is a public good.

• Family physicians provide most primary care visits. Visits to CRNP’s and PA’s are critically important. General internal medicine is declining.

• Number and distribution of primary care clinicians is inadequate.

• Primary care clinicians are under stress and at risk of leaving primary care practice.
Higher concentration of and access to primary care improves health.
Primary Care Oriented Countries Have

- Fewer low birth weight infants
- Lower infant mortality, especially postneonatal
- Fewer years of life lost due to suicide
- Fewer years of life lost due to all except external causes
- Higher life expectancy at all ages except at age 80

Starfield 07/07 IC 3762 n
“Each 10 additional primary care physicians per 100,000 people is associated with a 51.5 day increase in life expectancy.”
“Primary care is a public good.”
What does provision of primary care services look like in the U.S. today?

Exodus of General Internists Adds to Primary Care Shortage

May 12, 2010

Health and Human Services Secretary Kathleen Sebelius wants health care reform to “usher in a new era for primary care providers,” but a new report warns that increasing numbers of general internists are leaving the field.

A survey conducted by the American College of Physicians (ACP) and the American Board of Internal Medicine (ABIM) found that nine percent of all internists originally certified between 1990 and 1995 are no longer working in general internal medicine or any of its subspecialties. That figure includes both general internists and internal medicine sub-specialists. When the data for general internists is broken out separately, the portion defecting from the field rises to a whopping 17 percent, compared to only four percent for the sub-specialists.
Osteopathic physicians and foreign-trained physicians comprise a rising percentage of the primary care workforce.
Visits to primary care physicians are declining. Visits to NP’s and PA’s are increasing.
Figure 3: Cumulative Change in Office Visit Utilization, 2012-2016

- Total
- PCPs
- NPs and PAs
- Specialists
- Other Non-Physician

Percent Change in Office Visit Rate since 2012

- 129%
- 5%
- -3%
- -4%
- -18%
Among primary care physicians, 50.6% of them are women compared to 49.4% which are men.
Using the Census Bureau data, we found out how the percentage of each ethnic category trended between 2010-2019 among primary care physicians.

- White
- Hispanic or Latino
- Asian
- Black or African American
Primary Care Physician Wage Gap By Race

Asian primary care physicians have the highest average salary compared to other ethnicities. Black or African American primary care physicians have the lowest average salary at $207,205.
Primary care clinicians are concentrated in larger MSA’s. Family physicians are more likely to work in smaller communities and in rural settings.

Primary Care Clinician Type in Rural Areas

- Physician assistants are the most likely clinician type to practice in health area shortage areas.
- Nurse practitioners and nurse midwives are also more likely to practice in HPSA’s.
- Family physicians are far more likely than other physician types to practice in HPSA’s.
A higher percent of primary care physicians own their practice than one might think.
Primary care clinicians are feeling stressed.
Burnout rates among family physicians are high.

Physicians in selected specialties who reported burnout

- Neurology: 42%
- Diabetes/endocrinology: 40%
- Family medicine: 38%
- Ob.gyn.: 35%
- Rheumatology: 35%
- Infectious diseases: 34%
- Cardiology: 34%

Primary care practice is not satisfying enough.
COVID-19 has exacerbated stress level.
Shaping the future of primary care.
Implementing High-Quality Primary Care

Implementing High-Quality Primary Care: Rebuilding the Foundation of Health Care
National Academies’ Recommendations

1. Pay for primary care teams to care for people, not doctors to deliver services.
2. Ensure that high-quality primary care is available to every individual and family in every community.
3. Train primary care teams where people live and work.
4. Design information technology that serves the patient, family, and the inter-professional care team.
5. Ensure that high-quality primary care is implemented in the United States.
Implications for CRC Screening: Over-Arching Strategies

• Access to primary care is vital. Increasing access to primary care would reduce cancer mortality more substantially than increased access to oncologists . . . I think.

• We need to form stronger bonds with Nurse Practitioner and Physician Assistant leaders and organizations.

• We need more effective ways to partner with physician-owned practices.
Implications for CRC Screening: Office-based Interventions

• Promote participation in value-based payment models that are tied to quality outcomes and support team care.

• Increase linkages between primary care practices and organizations that can aid in population outreach.

• Continue to promote options for CRC screening.

• Engage local partners.
Thank you!
Improving CRC Screening Rates – Lessons Learned

Announcing the 2019 80% by 2018 National Achievement Awards Honorees

Please join us in congratulating the 2019 80% by 2018 National Achievement Award Honorees!

The 80% by 2018 National Achievement Awards is a program designed to recognize individuals and organizations who are dedicating their time, talent and expertise to advancing needed initiatives that support the shared goal to regularly screen 80% of adults 50 and over for colorectal cancer. Read more about the awards program.

Grand Prize Winner: NOELA Community Health Center
Category: Community Health Center

NOELA Community Health Center, a nationally recognized Patient-Centered Medical Home, provides comprehensive primary and preventive health care services to improve the health and wellness of the underserved communities in and around the New Orleans East area. After transitioning to a new electronic health record, in 2012, the year that colorectal cancer screening became a reportable measure.
Barriers, Missteps, Challenges, and Successes
Screening Barriers

**Patient**
- CRC screening not a priority
- Lack of awareness of screening options
- Lack of motivation
- Lack of transportation
- Cultural awareness

**Organization**
- Lack of Provider Recommendation
- No CRC registry available
- Lack of transportation
- No dedicated staff

**Medical Neighborhood**
- Nearest hospital >20 min from CHC
- Hospital w/backlog of colonoscopy referrals
- “High-Rise” bridge (115 ft., 1.27 miles long)

Image via WWL-TV
Major Ways We Learn

Reading literature

Listening to an expert

Trial and Error
Missteps
Missteps

- **Assumptions**
  - the process would be easy.
  - Provider focused
  - Completion of stool test
  - improvement would be quick.
  - “We’re in this alone.”

- **Setting the Bar too low**

- Implementing individual EBIs one at a time
Strategies for Expanding Colorectal Cancer Screening at Community Health Centers

Mona Sarfaty, MD, MPH1; Mary Doroshenk, MA2; James Hotz, MD3; Durado Brooks, MD, MPH4; Seiji Hayashi, MD, MPH, FAAFP5; Terry C. Davis, PhD6; Djenaba Joseph, MD, MPH7; David Stevens, MD8; Donald L. Weaver, MD9; Michael Potter, MD10; Richard Wender, MD11

Community health centers are uniquely positioned to address disparities in colorectal cancer (CRC) screening, addressed other disparities. In 2012, the federal Health Resources and Services Administration, which is the fund the health center program, added a requirement that health centers report CRC screening rates as a standard measure. These annually reported, publically available data are a major strategic opportunity to improve screening for CRC. The Patient Protection and Affordable Care Act enacted provisions to expand the capacity of the federal program. The recent report of the Institute of Medicine on integrating public health and primary care included an effort devoted to CRC screening as a target for joint work. These developments make this the ideal time to integrate CRC screening into the preventive care already offered by health centers. This article offers 5 strategies that address the health centers face in increasing CRC screening rates. The first 2 strategies focus on improving the processes of care. The third emphasizes working productively with other medical providers and institutions. The fourth strategy is in leadership. The final strategy is focused on using tools that have been derived from models that work. CA Cancer J Clin 2013;63:000-000. ©2013 American Cancer Society, Inc.

Keywords: colorectal cancer screening, community health centers, strategies or strategic planning, public health quality improvement, Patient Centered Medical Home

System Strategies for Colorectal Cancer Screening at Federally Qualified Health Centers

Jeanette M. Daly, RN, PhD, Barcey T. Levy, MD, PhD, Carol A. Moss, BS, and Camden P. Bay, MS

Federally qualified health centers (FQHCs) attempt to provide comprehensive, quality primary health care services to medically underserved communities and vulnerable populations. Approximately 1198 centers receive

Objectives. We assessed the protocols and system processes of cancer (CRC) screening at federally qualified health centers (FQHCs) states.

Methods. We identified 49 FQHCs in 4 states. In January 2013, medical directors completed a 40-Item questionnaire about policies on CRC screening.

@NCCRTnews | #80inEveryCommunity
Challenges
Major Challenges

• Developing the right screening strategy

• Patient Inertia

• Service Disruptions
  • COVID-19 Pandemic
  • Hurricanes

• Provider /Staff Turnover
Successes
Successes

- “FIT first” Strategy
- Patient Navigation
- Global / Opportunistic Approach
- Organizational Priority
- Patient Incentives
- Provider & Patient Reminders
- Provider Assessment & Feedback
Pearls of Wisdom

- Avoid assumptions
  - Process will be easy
  - Rates will increase quickly
- Administrative AND Clinical support is necessary
- “Don’t reinvent the wheel”
- Set “stretch” goals
- Behavioral modification strategies needed
Thank You!
• **Practice Type:** Multi-specialty physician practice
• **Location:** Greater Pittsburgh area
• **Primary Care System Statistics:**
  • 81,000+ patients
  • 2% (153 patients) are best served in a language other than English
  • 11% (8,939 patients) Black
  • 0.8% (679 patients) Hispanic
  • 1% (1,026 patients) of patients are uninsured
  • EHR: Allscripts
Allegheny Health Network Premier Medical Associates

• **Major Challenge:** Provider preference for colonoscopy

• **Strategies:**
  • Provider education and shift to offering a menu of CRC screening options
  • Transparent data reporting
  • Proactive outreach to patients reaching screening age
  • Automated robocall reminders
  • Test completion tracking with a FIT registry and abnormal FIT registry

• **Results:** CRC increased from **57.5% in 2012 to 80% in 2015.**
• **Spotlight on Step #3: Get Patients Screened**
• Make a Recommendation
  • Multiple studies have shown that a recommendation from the provider (or a member of the provider’s team) is the most influential factor on patient screening behavior.
• **Track Return Rates and Follow-up**
  • An organized system to track screening tests and follow-up is very important in a screening program.
We asked you: Barriers
From a provider or practice perspective, what are some of the biggest barriers in providing colorectal cancer screening in primary care?

- Clinic Staffing & Infrastructure
- Access to Colonoscopy
- Access to Insurance
- Access to Care
- COVID-19 Pandemic
- Provider Education
- Patient Fear & Distrust
- Adherence to Screening Recommendation
The NCCRT Resource Center

The NCCRT Resource Center contains evidence-based resources and tools to help you increase quality colorectal cancer screening in a range of settings and populations.

nccrt.org/resource-center
The NCCRT Steps Guide provides step-by-step instructions to help health centers implement processes to increase CRC screening.

The 2014 edition has been instrumental in helping numerous health centers achieve improvements in their CRC screening rates.

nccrt.org/resource-center
The newly updated Steps Guide includes:

• Expansion to all primary care Latest science and best practices
• Current guidelines and test options
• Expert-endorsed strategies
• 10 case studies of exemplary practice sites
• Samples, templates, and tools

Coming August 2022!

nccrt.org/resource-center
The NCCRT Steps Guide

OVERVIEW OF THE SCREENING PROCESS

STEP 1: MAKE A PLAN
- Determine Baseline Screening Rates
  - Identify your patients eligible for screening.
  - Identify patients who received screening.
  - Calculate the baseline screening rate.
  - Improve the accuracy of the Baseline Screening Rate.

STEP 2: IDENTIFY A TEAM
- Form an Internal Leadership Team Within the CHC
  - Identify an internal champion.
  - Define roles of internal champion.
  - Utilize patient navigators.
  - Define roles of patient navigators.
  - Agree on team tasks.

- Partner with Colonoscopists
  - Identify a physician champion.

STEP 3: SCREEN PATIENTS
- Prepare the Clinic
  - Conduct a risk assessment.
- Prepare the Patient
  - Provide patient education materials.

- Make a Recommendation
  - Convince reluctant patients to get screened.

- Ensure Quality Screening for a Stool-based Screening Program
  - Track Return Rates and Follow-up
- Measure and Improve Performance

STEP 4: COORDINATE CARE
- Coordinate Follow-up After a Colonoscopy
  - Establish a medical neighborhood.
The NCCRT Steps Guide – 2022 Update

Appendices:
- Colonoscopy Needs Calculator
- Readiness Assessment Tools
- FIT/FOBT Sample Workflow Process
- Coding Guidance
- Updated EHR Workflow Documentation Screenshots
- Sample screening reminder and recall letters and call scripts
- And more…

SCRIPT FOR ABNORMAL FIT RESULT

Hi [Patient Name],

This is [Caller's First Name]. I work with Dr. [PCP] at Mercy. You recently completed a Fecal Immunochemical Test (FIT) to check for colon and rectal cancer. The results of your test were abnormal, showing blood in your stool. Dr. [PCP] would like you to schedule an appointment to discuss next steps.

IS NOW A GOOD TIME TO SCHEDULE AN APPOINTMENT?
- “Yes” — (Book the appointment and confirm.) You are scheduled for _____ day and time with _______ (doctor or APP name). He/she will have a copy of your results and a copy will also be mailed to you.
- “No” — I recommend that you see Dr. [PCP] in the next two weeks. He/she will let you know what you need to do next.
- “No” — I’m no longer seeing Dr. [PCP]. You may want to call Dr. [PCP] or your primary care provider to talk about your test results. He/she will send your results to your primary care provider.
- “No” — Do you need help?

NCCRT Market Research & Crafted Messaging

• In 2014, NCCRT conducted its first market research project
• Released the 80% by 2018 NCCRT Communications Guidebook
• Companion Guides reflecting market research on messaging to Asian Americans Hispanics/Latinos released in 2015/2016 The NCCRT Colorectal Cancer Screening
• Messaging Guidebook: Recommended Messaging to Reach the Unscreened was released in 2019
• Recent release of Messaging Guidebook for Black & African American People
Lead-Time Messaging to Encourage On-Time Screening

Originated from an idea to tailor messaging to the those under 50 years or age, or who had just turned 50

Project goals:

• Find messaging to raise awareness around CRC screening among 20–44-year-olds.
• Better understand perceptions about CRC and likelihood to get screened on-time.
• Develop recommendations for reaching younger audiences with screening messaging (what do they want/need to know, when should it be delivered, and who should deliver the information).
• Determine effective messaging that best resonates with this audience.
Lead-time Messaging: Impact of the Provider Recommendation

- Less than half with a family history have discussed CRC screening with their physician
- Only 20% have discussed CRC screening with a HCP
- ~ 3 in 10 plan to wait for their HCP to bring up screening
- 47% think people should start based on whatever their HCP recommends
- 51% prefer to receive CRC screening information from health care providers
- Doctors (85%) and other HCP (79%) are the most trusted sources for information
Crafted Messages

Themes for messages derived from Phases 1 & 2:

- Preventable & treatable if caught early
- Tied to wellness
- Rising rates of CRC in young adults
- Family history

What we want our top messages to ultimately convey to our audience:

- Aged 40+ and average risk: get screened
- Younger audience: Those with a family history motivated to convey that information to their doctors
- Young & symptomatic: talk with their doctor ASAP
The NCCRT Annual Meeting
November 16-18, 2022
Baltimore, Maryland

Presentations by nationally known experts, thought leaders, and decision makers on CRC screening policy and delivery, with opportunities to network and learn from each other.

How the AAMA Became a Dedicated Partner of the NCCRT in the “80% in Every Community” Initiative

THE AMERICAN ASSOCIATION OF MEDICAL ASSISTANTS® (AAMA)

DEBORAH NOVAK, CMA (AAMA), VICE PRESIDENT

DONALD A. BALASA, JD, MBA, CEO, LEGAL COUNSEL

DBALASA@AAMA-NTL.ORG

NOVEMBER 2021
Medical assistants and the AAMA

Medical assistants work in outpatient settings and perform both back-office clinical and front-office administrative duties.

60% of CMAs (AAMA) work in primary care.

The American Association of Medical Assistants (AAMA) represents over 90,000 medical assistants throughout the United States.
Why CRC screening?

There are many worthy public health causes (e.g., preventing alcohol-exposed pregnancies and FASDs).

AAMA national and state leaders were encountering a number of tragic colorectal cancer situations in their professional and personal lives.

They realized that medical assistants could make a significant difference in increasing CRC screening rates.
How medical assistants make a difference

Oftentimes, medical assistants are “communication intermediaries” between providers and patients. For example, medical assistants are often assigned patient education. Medical assistants are assuming patient navigator and patient advocate roles.
Strategies

AAMA continuing education courses and articles in CMA Today were geared toward empowering medical assistants to be more effective advocates for CRC screening.

The focus intensified during CRC Awareness Month and Medical Assistants Recognition Week.

Medical Assistants’ Role in Improving CRC Screening Rates: Getting to 80%; Durado Brooks, MD, MPH
3,964 health professionals successfully completed the course for AAMA CEU credit.

AAMA posts in Facebook, Instagram, LinkedIn, and Twitter resulted in 183,613 impressions.

AAMA state societies, local chapters, and academic programs created their own CRC screening educational events, thus multiplying the impact.
Partnership with NCCRT

Medical assistant managers used NCCRT materials and information to provide in-service training for staff.

They also used NCCRT materials as a basis for role playing so staff would be more comfortable talking with patients about CRC screening.
Thoughts for other professional societies

Don’t underestimate the generosity and commitment of health professionals. They are often motivated by noble challenges.

Verifying CRC screening should become just as integral a component of primary care practice as verifying patient immunizations.
We asked you: Overcoming Challenges
From a provider or practice perspective, what do you recommend for helping overcome challenges in promoting CRC screening in primary care?
We asked you: *Essential Partners*
Which essential partners should be working together to catalyze primary care around CRC screening?
Acknowledgments
